

Company Introduction

Baoding Furuike Special Ceramic Products Manufacture Co.,Ltd(original Baoding Win-Win Compound Material Co.,Ltd) is engaged in high-performance friction resistance material and the professional development and production company, my company R&D and production of water-lubrication bearing materials, wind -driven generator brake materials in the domestic leading level. We have got ISO9001 Quality Management System Certification and ISO14001 Environmental Management System Certification from China Classification Society.

Our research and development since 2002, wind -driven generator brake material, has designed and manufactured for resting small inertia brake testing machine SYFS-1,wind- driven generator high-speed axis braking gantry testing machine SYFS-2,and the wind -driven generator yaw friction testing machine SYTJ-3,the above testing machine could simulate wind-driven generator the actual working conditions, they friction material for the development of wind power provides a good testing method.

Our company research and development the high- speed axis wind-driven generator brake materials has been tested by foreign manufactures,and technical specification has been consistent with MIBA Corporation MD550,Currently in the country internal wind electric field

and the brake caliper wind plants have been widely used.

Our company adhere to the “Integrity of win-win” principle, take the science and technology enterprises and innovative way, and gradually become a scientific research, production, sales as one of modern science and technology enterprises. Scientific management, strong technical strength, complete detection means Furuike salable products customers assurance that we will make unremitting efforts, quality products, good reputation for the new old customer service and we Welcomes enquires from all locations around the world. We look forward to providing you with a free quotation in the near future.
