

HEICO group was founded in Germany in Y1900 and now has 13 subsidiaries globally. With its continuous process improvement program and in-house engineering & machine building department the group has developed over the 117 years into a leading provider of high quality solutions.

HEICO-LOCK® wedge locking system is one of the few effective securing technologies which meet the latest standards DIN25201-4. The main feature of the system is using tension instead of friction to secure bolt connections. This certified system works at low and high preload levels including when using lubricants. It is very easy to be installed, removed and re-used.

HEICO-TEC® tension nuts meet all the requirements of ISO898-2 and thus can replace any hex nut from the same strength class. A hand-held torque wrench is all you need. Confirmed by DNV GL, HEICO-TEC® tension nuts guarantee the highest tightening and repeat accuracy.
